

ITEM 7.6.0 | INTEGRATION TOOLKIT

An integration toolkit should be provided for any implementation purposes. This toolkit consists of detailed documentation identifying:

- A plain language name for the integration toolkit.
- A Universally Unique Identifier (UUID) for the integration toolkit (mandatory element) - A UUID for the integration toolkit as agreed upon by the entities involved.
- A UUID for other existing or new data exchange specifications - This UUID allows versioning of the specification and promotes controlled upgrades and modifications between different data systems.
- A clear plain language description of the contents of the data being transferred including appropriate references to specifications if necessary.
- Example XML requests and responses, data dictionary (including the detailed description/format of each data element or attribute), references to appropriate business rules, relevant standards and definitions, XML schema definition files, theory of operation, Major Design Elements - (MDEs, and sample usage cases for each MDE (See Appendix C).
